Our Environment

Introduction

In the nature if we see around our self we that we are surrounded by many things:

The large variety of plants(the flora)

The large variety of animals including human being (the fauna)

Various types of gases

The planet system the Sun, The moon, The stars

Natural creations like the sea, the forest, the desert, the mountains, the rocks, the hot, the cold,

These all together constitute an environment

Our Environment is made up two types of components i.e

Living components(Biotic) and

Non-living components(Abiotic)

Concept of Environment

Ethical meaning
