

Evolution of Humankind

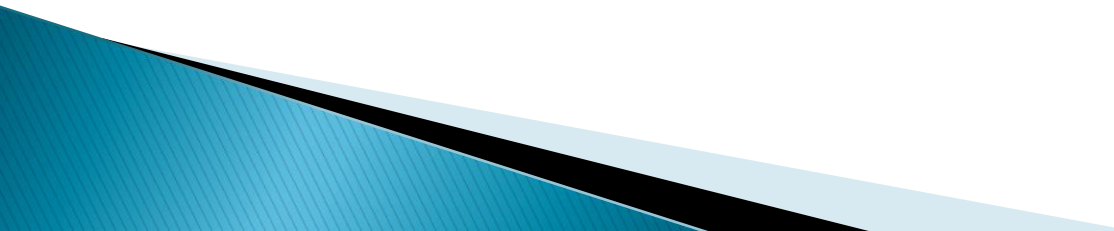

Prepared by: Dhanya Ram Roy

- Paleolithic and Mesolithic Culture
 - Food Production: Beginning of Agriculture
 - Animal Husbandry
- 

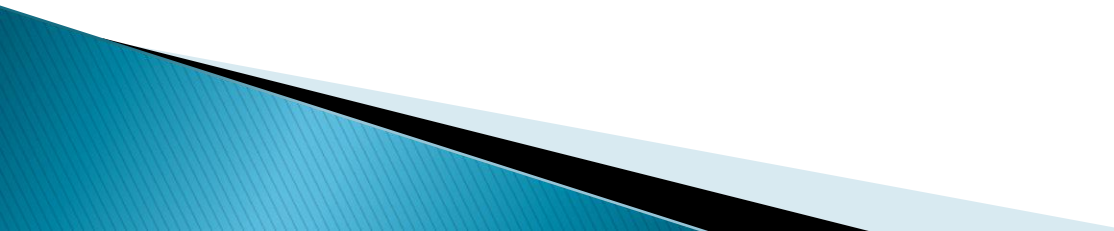

Origin of the Earth

- Evolution of Scientific Theory
- The Nebular Hypothesis
- Planetesimal Hypothesis

Origin of Life on the Earth

- ▶ Origin of Water-plants about 700,000,000 (70 crore) years ago.
 - ▶ Origin of Animals about 500,000,000 (50 crore) years ago. These creatures are known as 'Protozoa'. One of them is known as 'Amoeba'
 - ▶ From 'Protozoa', the simplest kinds of FISHES began to grow in the water.
 - ▶ From FISHES, a some kinds of animals known as AMPHIBIA –such as frogs and newts grew which could live both in water and on land.
 - ▶ After AMPHIBIA, some new kinds of animals called REPTILES-such as lizard and snakes originated.
 - ▶ The DINOSAURS was one kind of large reptile. These reptiles lived on the earth about 70,000,000 (7 crore) years ago.
 - ▶ Birds originated from these reptiles.
 - ▶ Last of all came MAMMALS-animals which suckle their young ones.
- 

The origin of Humankind

- ▶ Ape (Monkey)
 - ▶ Australopithecus
 - ▶ Homo Erectus
 - ▶ Homo Sapiens
 - ▶ Modern Human Beings
